

# OYSTER SORTER

LESS THAN A MINUTE IS ALL IT TAKES...

Imagine sorting a bushel of oysters in less than a minute... completely by yourself! This is a reality with an oyster sorter.

The oyster sorter is composed of stainless steel and aluminum and features compartments where plastic product bins fit snugly to collect the cleaned, graded animals.

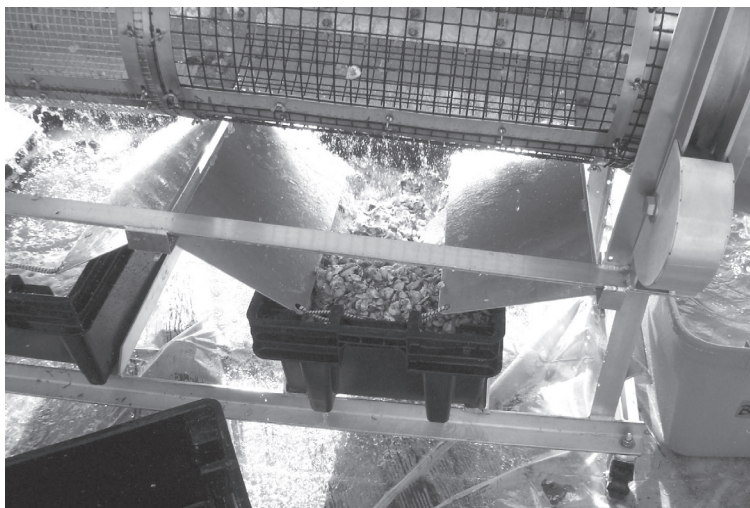

The sorter runs off of electricity and can be plugged in to any standard outlet or generator. (A hydraulic option is also available.) While the sorter can be run dry, it easily connects to water pumps of all sizes.

One of the fantastic features of the oyster sorter is that the mesh is completely interchangeable. The sorter is capable of grading oysters of three different sizes at one time. Mesh is available from 1/4" up to 3".

The sorter literally replaces the labor of three men. Because it is automated and cleans the oysters via power sprayers, the physical work associated with it is limited. One person is all it takes. The sorter is able to clean and grade your oysters at a rate of a bushel per minute! In addition, the rotating drum of the sorter prunes the shell, giving the oysters a beautiful

rounded shape. This pruning also helps the oyster form a deeper cup, which means more meat and a more marketable oyster. Requiring only a simple wash down after use, the sorter truly does do all the work!

Like other Chesapeake Bay Oyster Company products, we use what we sell. Using the sorter on our own oyster farm, we are able to effectively grade our oysters at a faster rate than when done by hand and use less manpower to do it. The oyster sorter reduces the need for additional labor and associated costs for many seasons to come. This, coupled with the added benefits of consistent and appealing oyster shape, makes this piece of equipment a must for any serious oyster grower.
